

# Exhaust air valve OPF Steel-series

OPF Steel-series, exhaust air valve, 80 mm - 125 mm

# Exhaust air valve OPF Steel-series

OPF Steel-series, exhaust air valve, 80 mm - 125 mm

OPF Steel is a round valve with aerodynamically design with good characteristics in terms of noise level, air flow capacity and pressure drop. The valve is mounted in a ceiling or a wall and is intended for ventilation systems with a relatively high pressure drop. The design of the valve and a gasket of moltoprene prevents soiling.

## Attachment, adjustment and detachment

The valve is pushed into the frame. The cone is screwed out or in the number of turns giving the gap an opening in mm corresponding to pressure drop and the desired air flow. The pressure drop can be checked by using a suitable measuring device. When dismantling, the valve is pushed sideways and then pulled out.

## Material

The valve is made of sheet steel and is available in the following diameters:  $\varnothing$  80,  $\varnothing$  100,  $\varnothing$  125.

## Cleaning

The valve is cleaned with normal detergent.

## Color

Standard white.
